EXPERIENCE

Front-End Web Developer – Central Statistics Office, Cork City, Ireland   **July 2017 - June 2018**

The CSO is a government organisation in Ireland that is involved in gathering and disseminating statistical information for Irish society. My original contract for 6 months was extended to August 2018 due to performance.

- Designed and built a modular front-end framework similar to bootstrap for internal applications to keep the same look and feel across applications.

- Built a public facing website designed to display innovative and experimental statistics called *'CSO Innovation'.*

- Built a 'Baby Names of Ireland' web application that received national news coverage and is the most popular application the organisation released. The app itself provides a rating based on number of births in a given year for that name.

- Built a 'Personal Inflation Calculator' web application that calculates personal inflation based on interactive user input.

- Built a 'Census Hub' website to display information about the upcoming 2021 Census in Ireland

- Attended a 5 day front-end training course (HTML, CSS, JavaScript, AJAX, JSON)

Front-End Web Developer – Freelance, Cork City, Ireland   **Dec 2017 - Present**

I have completed three freelance projects since December 2017. These were completed for small local businesses in Cork City. All involved client questionnaires and in detail explanation of design and build processes.

- 95+ Google Pagespeed Insights
- Responsive Web Design
- Google Analytics, Google Maps API
